

# PROMISE

## PROCESS MANAGEMENT IN SOFTWARE ENGINEERING

ALLYGILL.CO.UK — Software Process Management made Easier

# THE PREMISE FOR PROMISE

- ❑ Software Process Improvement initiatives often fail because they are seen as transient activities and are not sustainable
- ❑ Software Process Management is an essential full time function within the software development and maintenance environment
- ❑ PROMISE will make a Software Process Management function easier to build and run

# WHY SOFTWARE PROCESS MANAGEMENT ?

- ❑ “Process Improvement” fails to adequately describe all the activities required to establish and sustain an effective process infrastructure
- ❑ Process Management encompasses:
  - Process Definition and Implementation
  - Process Control and Monitoring
  - Process Improvement
  - Process Compliance and Assurance
  - Process Management Infrastructure

# WHY SOFTWARE PROCESS MANAGEMENT ?

- ❑ Software Process Management reinforces the idea of a long term strategic focus for organisations who want to perform better
- ❑ Software Process Management allows the enterprise to create the foundations for all future improvement opportunities
- ❑ Software Process Management promotes a culture of process and quality awareness

# PROMISE – AN INTRODUCTION

- ❑ PROMISE - Process Management in Software Engineering – is a model for designing, building and running a Process Management Function within a Software Development enterprise
- ❑ PROMISE can be tailored and applied to single or multiple reference models in any size of organisation
- ❑ PROMISE focuses on People, Infrastructure and Activities associated with Process Management

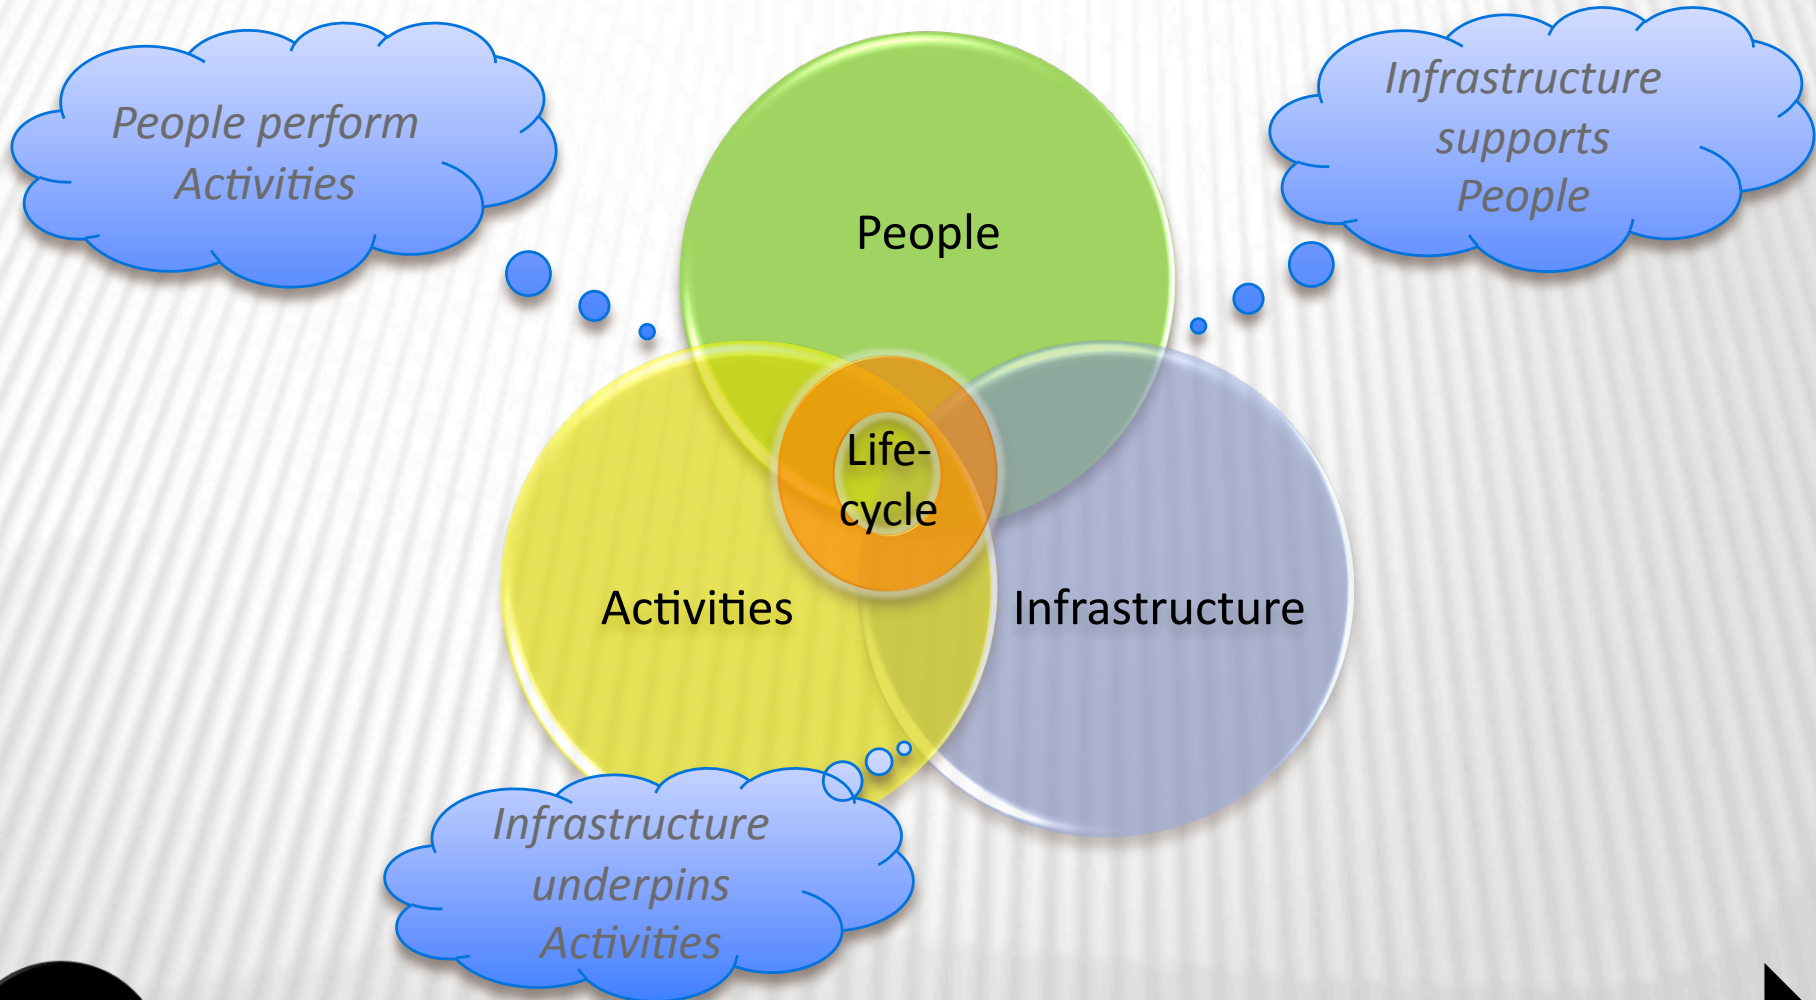

# PROMISE – AN INTRODUCTION

---

- ❑ PROMISE has been designed for Process and Quality Management leaders and teams, and their managers and executives
- ❑ PROMISE will make Software Process Management easier to initiate and sustain
- ❑ PROMISE – is the product of twenty five years of experience in Software Engineering, Project Management, Quality Management, Change Management and Process Improvement & Management

# PROMISE - ARCHITECTURE

# PEOPLE – PERFORM ACTIVITIES

- ❑ People are at the heart of PROMISE activities
- ❑ Roles and responsibilities are not widely understood even in organisations with a history of SPI
- ❑ SPM skills are required across the organisation not just within the SEPG or Quality Forum
- ❑ SPM skills must be understood and used by all levels of management
- ❑ PROMISE defines roles and responsibilities independently of other corporate job titles and codes

# INFRASTRUCTURE – UNDERPINS ACTIVITIES

- ❑ Infrastructure refers to the IT and organisational support required to maintain an SPM function
- ❑ A solid infrastructure facilitates the execution of SPM activities
- ❑ Infrastructure includes process libraries, documentation, data repositories and other supporting tools
- ❑ Within PROMISE infrastructure includes reference models and methodologies

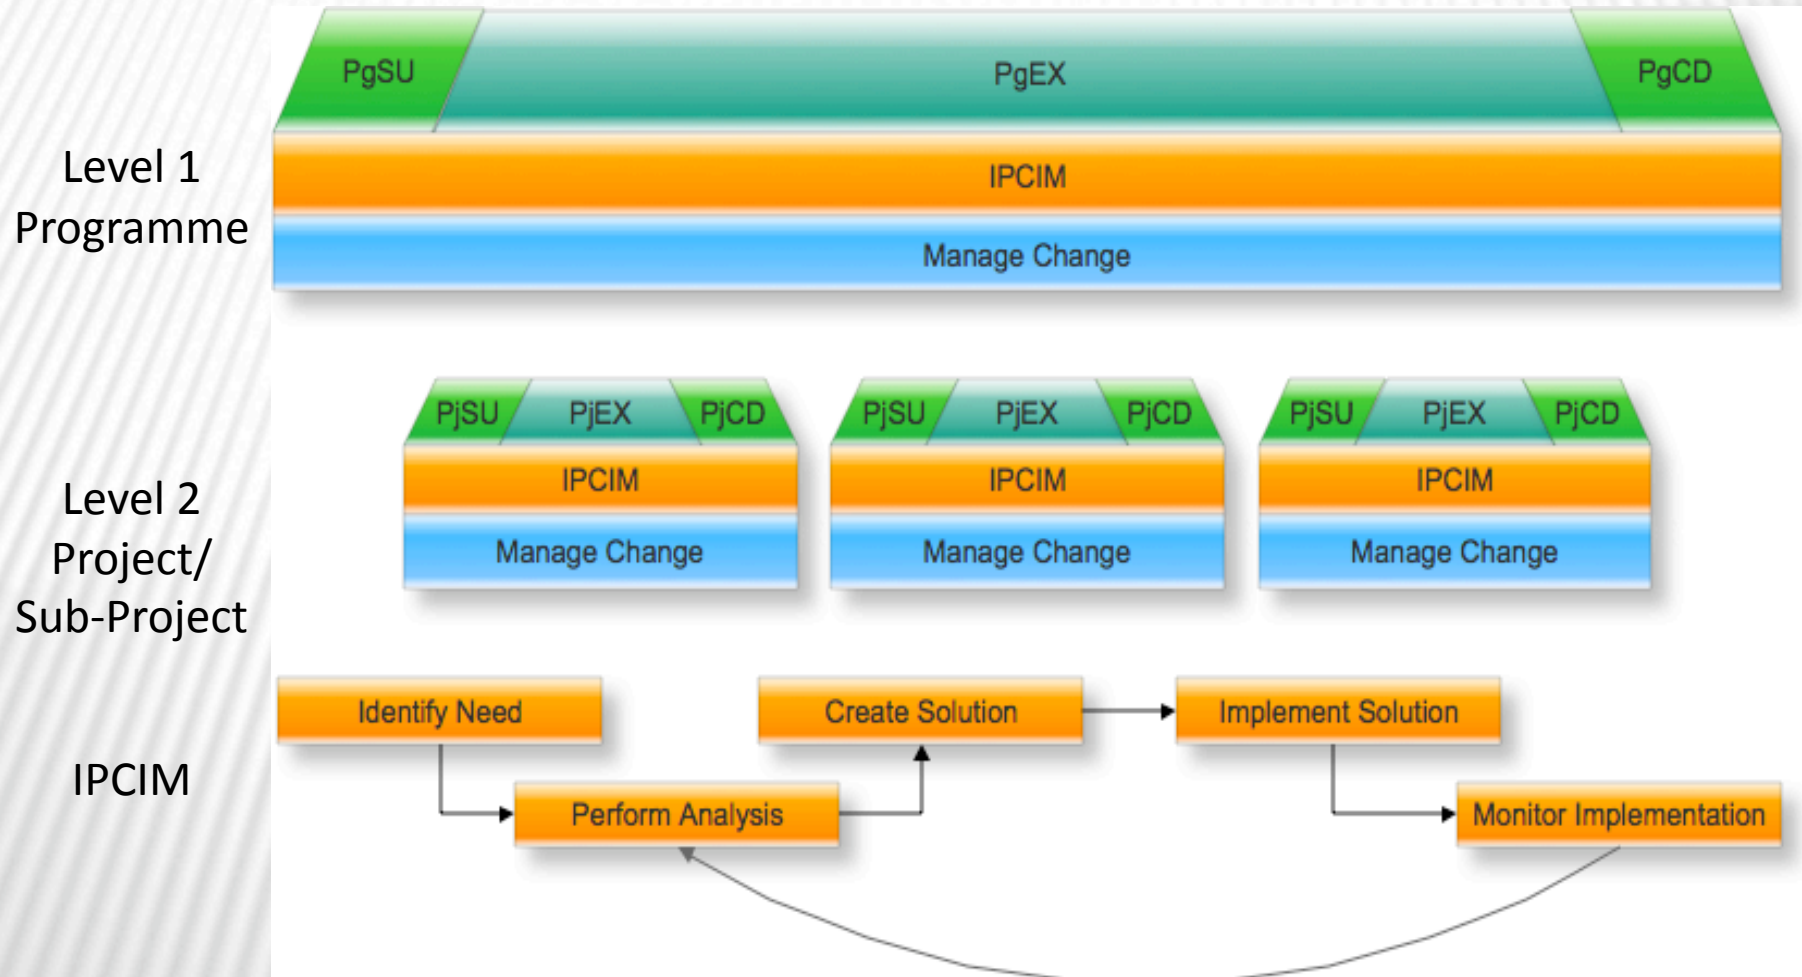

# ACTIVITIES – OPERATIONAL TASKS IN SPM

- ❑ PROMISE defines the following sets of activities:
  - ❑ Process Requirements and Definition
  - ❑ Planning and Management
  - ❑ Implementation and Deployment
  - ❑ Measurement and Control
  - ❑ Improvement
  - ❑ Compliance and Assurance

# PROMISE – THE LIFECYCLE

# INTERPRETING THE LIFECYCLE

- ❑ The IPCIM process is at the heart of all programmes, projects and sub-projects
- ❑ Programmes, projects and sub-projects have three elements :—
  - ❑ Programme/Project Management (PgM/PjM)
  - ❑ IPCIM
  - ❑ Management of Change (MoC)
- ❑ PgM/PjM and MoC elements can use existing corporate methods if they exist

# UNDERSTANDING IPCIM

---

- ❑ **Identify Need** – establish programme or project drivers and business requirements
- ❑ **Perform Analysis** – understand and define the as-is and to-be models and high level transition plan
- ❑ **Create Solution** – build the processes and associated solution definition and pilots
- ❑ **Implement Solution** – deploy the solution into the live environment
- ❑ **Monitor Implementation** – monitor key performance indicators, measure success and create lessons learned
